

Danger lurks all around as the Slug continues its perilous mission on the seabed.

SECRET WAR OF THE SLUG

A secret underwater craft — the Slug — crawled along the Arctic sea bed. Its mission was to investigate a closely-guarded Eastern bloc base known as Icehead. The Slug had a crew of three — inventor John Peters plus servicemen Captain Wade and Petty Officer Tommy Cook.

Released from the Slug, a buoy reached the surface, then was lifted into the sky by a small balloon. Seconds later a high speed radio transmission was picked up at the Slug's base in a Norwegian fjord.
